SUMMARY

Second-year Computer Science student at NUST with hands-on MERN stack experience through production-grade academic projects. Proficient in JavaScript (ES6+), RESTful API design, OAuth 2.0, JWT authentication, Redis, Docker, and Git-based agile workflows. Actively seeking a junior full-stack or internship opportunity to contribute to and grow within a professional engineering team.

EDUCATION

National University of Sciences and Technology (NUST)

Islamabad, Pakistan

Bachelor of Science in Computer Science

2024 – 2028

- Relevant Coursework: Object-Oriented Programming, Data Structures & Algorithms, Theory of Automata, Computer Organization & Assembly Language, Digital Logic Design, Advanced Database Management Systems

TECHNICAL SKILLS

Languages: JavaScript (ES6+), C++, PHP, HTML/CSS

Frameworks & Libraries: React.js, Node.js, Express.js, Tailwind CSS

Databases & ORM: MongoDB, Redis, Prisma

Auth & Security: OAuth 2.0, JWT, Rate Limiting, Session Management

Cloud & DevOps: Docker, Docker Compose, Git, GitHub, Postman, XAMPP

Concepts: RESTful APIs, Agile/Scrum, Load Balancing, Containerization, OOP, Version Control

PROJECTS

Crowdfunding Platform | MERN Stack, Docker, Redis, Prisma, Stripe, Tailwind CSS

2026

- Built a production-ready full-stack crowdfunding application with a 4-person team using an agile sprint workflow; designed and documented the REST API layer using Node.js and Express.js
- Integrated Stripe for secure end-to-end payment processing and Google OAuth 2.0 + JWT for authentication, reducing account-creation drop-off and securing protected routes
- Implemented Redis-based rate limiting and load balancing, enabling the platform to sustain 3× simulated peak traffic without performance degradation
- Containerized all services with Docker Compose for consistent multi-environment deployment, eliminating environment-specific setup issues across the team
- Used Prisma ORM for type-safe, schema-managed database access on MongoDB, reducing data-layer bugs during development

Scholarship & Exchange Program Portal | PHP, HTML, CSS, JavaScript, XAMPP

2025

- Designed and delivered a multi-page dynamic web portal enabling students to browse and apply for scholarship and exchange programs
- Built server-side logic in PHP with a XAMPP stack, implementing session management and form validation to ensure data integrity
- Created a fully responsive, mobile-friendly front-end with HTML, CSS, and vanilla JavaScript (ES6+)

Digital Student ID System | PHP

2024

- Developed a PHP-based system to generate and manage digital student identity cards with dynamic rendering of personalized data
- Implemented role-based access control (RBAC) — administrators could update records while students were restricted to read-only views of their own profiles

EXTRACURRICULAR ACTIVITIES

Association for Computing Machinery (ACM) — NUST Chapter

2024 – Present

Executive Member

- Help plan and run tech talks, competitive programming contests, and hands-on workshops for 200+ student members
- Coordinating outreach to connect junior students with internship and research opportunities within the NUST tech community
